# PLASTIC CONSCIOUS

We strive to provide real solutions to plastic alternatives with products at affordable prices. By partnering with businesses at the forefront of eco friendly product development, we are leading the charge in encouraging change.

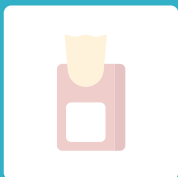

As a business, we always strive to do better, whether it's providing great customer service, aiding awareness, or supporting businesses making the switch from single use plastics. We prioritize impact investing in causes that further reduce environmental issues worldwide and partner with like minded associations that have the ultimate goal of driving meaningful change.

A Plastic Ocean

## OUR STORY

The multi award winning environmental documentary, **A Plastic Ocean** was one of the first drivers in the movement to reduce single use plastic. Our team was proud to be involved in the production of the film and ever since, raising awareness of plastic pollution has been our first agenda. Single use plastics are a significant problem and we continue to campaign around the globe, promoting the need for change.

**A Plastic Ocean** has been screened in over 90 countries and on 6 continents, achieving 14 plus film festival awards. There have been over 5,000 screenings hosted by government agencies, non-profits, schools, universities, individuals, multilateral institutions, corporations, aquariums and many more.

The much anticipated follow on film, **The Last Glaciers** captures the fragility of the natural world, the impact humans have on our life support systems and the friendship, personal challenges and tragedies experienced by the explorers during their journey.

The Last Glacier

# SUSTAINABLE ALTERNATIVES

Plastic conscious, founded by restaurateurs and environmental ambassadors, is uniquely positioned to develop and supply specialist sustainable and plastic free products for the hospitality industry. Unlike most our competitors, our products are specially designed for commercial use.

## RAW MATERIALS

### CELLULOSE/ STARCH

Organic material that is ethically harvested from corn and biodegrades quickly without emitting toxic gases.

### PLA

A bio monomer derived from renewable sources (sugar or corn), degrades quickly, requires less energy to produce and emits less greenhouse gases than traditional plastic.

### BAMBOO

There are many benefits to using bamboo toilet paper instead of traditional toilet paper. Bamboo absorbs 4 times more CO<sub>2</sub> than typical plants and trees and releases more oxygen.

Bamboo is one of the fastest-growing plants on the planet, with our species of bamboo reaching full maturity in about 120 days. Bamboo also breaks down fully and quickly. It is strong yet can be soft and can be found in other products most of us own from t-shirts and furniture to construction of homes and buildings.

## SUPPLY CHAIN

With an outreach that spans 3 continents, our procurement team are here to assist your business. Our boots on the ground approach, allows us to undertake factory audits, provide quality control on all orders, giving comfort to our Clients wherever they may be located and removing the stress and unknowns from placing orders from overseas destinations.

## WHY PLASTIC CONSCIOUS?

- ✓ Products to be from sustainable and renewable sources and cared for from cradle to grave
- ✓ Offer white label retail and commercial products
- ✓ Products to be home compostable and safe in oceans and landfill
- ✓ Specialists in supplying hotels and food and beverage outlets
- ✓ Warehousing facilities to hold inventory in each region
- ✓ Research and Development of new products
- ✓ Donate resources to poorer Nations
- ✓ Generations of expertise in Asia
